Message

Dear Colleagues:

Time flies by so quickly and TOPIC will soon mark its 12th year. When TOPIC started, we course directors were all around 40 years old. The first TOPIC was held in 2003 at the Toshi Center Hotel in Akasaka, Tokyo, and there were about 1,000 participants. Its scale was not as large as at present and the program was far less extensive, with only one or two sessions in addition to live demonstrations. You can find the details of the subsequent history of TOPIC in the TOPIC 2013 syllabus and we recommend reading it if you are interested. The number of participants has increased over the years and about 3,000 attended the last two conferences. Comparing the first TOPIC with the current one, there is not much difference in the basic concept. Challenge to improve the management of complicated lesions, including CTO, is the primary objective. We have made it a prerequisite when carrying out our activities to allow differences of opinion. It was a consensus among the four of us that we should avoid imposing a certain viewpoint as far as possible. To prevent the live demonstration course from being broken up into short segments and by utilizing sub-screens, we have made it our policy to show complete procedures. We believe that this approach is the main reason TOPIC has gained your approval and cooperation, which is the major source of energy that has propelled us forward to where we are now. We hope to continue with the same concept this time.

We believe that another factor contributing to the development of TOPIC is an emphasis on education of young physicians and health professionals. It is a fact that we did not initially devote so much of our efforts to such education, but now it has become an important part of TOPIC along with the live demonstration course. As we course directors grow older, we are placing more priority on education and oral handing down of techniques, taking generational change into consideration. We will also continue working on the syllabus, which of course falls within the context of education. We hope that by reading our syllabus each year, you will be able to smoothly receive an update on all the current interventional trends.

Turning our eyes overseas, we find that there are some countries where use of intervention is decreasing and others where it is increasing at a rapid pace. The reasons for the decrease seem to include improvement of the long-term prognosis by DES, limitation of indications for intervention based on the results of large-scale clinical trials, and medical economy, etc. In countries where intervention is increasing, this does not seem to be attributable to an increase of the population or increased disease prevalence, but to economic development. Japan is an exceptional country where everybody can have the same access to medical treatment thanks to universal healthcare. Japan is the only country where CT and MRI, intervention making full use of IVUS, OCT, etc., and follow-up by ANGIO guide are all covered by national health insurance. We need to think about the direction that intervention should take in Japan by first understanding these facts/denervation.

TOPIC 2015 will be held at the Cerulean Tower Tokyo Hotel, Tokyo from Thursday, July 9 to Saturday, July 11, 2015. We will continue to make advances and increase our capacity, even if only modestly, while maintaining our basic concept. We request the pleasure of your participation in TOPIC 2015 and we would also like to take this opportunity to express our appreciation for your cooperation.

Best regards,
