Message

Dear Colleagues:

It’s now time for me to inform you about the 13th TOPIC meeting in 2016. Since 2012, approximately 3,000 people have participated in TOPIC every year. First of all, I would like to take this opportunity to express my gratitude to all attendees for your understanding and cooperation.

The core concept of TOPIC is the challenge of treating complex lesions, especially CTO. When we (the four course directors) established TOPIC, we attached maximum importance to showcasing the diversity of strategies available. For example, there is still controversy about whether a CTO should first be approached antegrade or by retrograde collateral tracking, and also about the direction of wiring after the retrograde approach is adopted. Because there is no clear evidence at present, we will not propose a standardized policy for you to follow. By attending the next TOPIC meeting, you will be able to see and compare various strategies yourself. Then you can evaluate each strategy along with the other participants. We will also continue to show live videos by using sub-screens to present clear images.

In recent years, catheter-based treatment has advanced rapidly for coronary heart disease, as well as for peripheral vascular disease, valvular disease, and congenital heart disease. At the next meeting, we will hold various sessions, including live video sessions, so that the current state of catheter-based treatment for cardiovascular disease can be assessed comprehensively.

Another aspect of TOPIC is education for young co-medical personnel. In this area, we will continue to attach importance to providing technical knowledge through workshops and live video sessions. We will also make efforts to further improve our educational syllabus. Our objective is for you to be able to comprehensively and efficiently learn about the current state of catheter-based treatment by reading the annual syllabus.

However, learning the general aspects of catheter-based treatment from books is not really enough. When you encounter rare complications or special cases, you will only be able to manage them well if a group of physicians and co-medical personnel work together. Therefore, a large number of case report sessions will also be included in the next meeting. I would be very happy if many of you apply to attend TOPIC.

If you compare Japan with other countries, you will recognize that we live in an exceptional country where everyone can receive equivalent medical care, including catheter-based therapy, under the national health insurance system. In general, CT and MRI are used for diagnosis, followed by intervention with IVUS, OCT, etc. and then follow-up CAG. On the other hand, the period required for approval of new medical devices in Japan is probably the longest in the world. We plan to invite numerous experts from overseas to the next meeting, and while listening to their explanations about current treatment in other countries, we would like to consider the future of interventional therapy in Japan.

As usual, TOPIC 2016 will be held at the Cerulean Tower-Tokyo Hotel from July 21st (Thursday) to July 23rd (Saturday). We are making efforts to enhance the timeliness and power of the next TOPIC meeting, while firmly maintaining its fundamental concepts. Your attendance is earnestly requested.
