Dear Colleagues:

The Tokyo Percutaneous Coronary Intervention Conference (TOPIC) 2003, which aimed to positively acknowledge the various therapeutic strategies in PCI, was a great success with 1,200 participants, including medical doctors, co-medicals, and corporate representatives. We would like to express our sincere appreciation to those who supported the meeting.

What are the characteristics of PCI in Japan today? Most cases of chronic total occlusion are treated with PCI using unique and sophisticated wiring techniques. Logical coronary interventions are performed under IVUS guidance, and debulking devices, such as DCA or rotational atherectomy, frequently employed. More and more medical institutes are actively treating non-protected left main stenoses with PCI. At the same time, the minimally invasive trans-radial approach is applied in almost 20 percent of all cases. Primary PCI together with thrombectomy devices is the treatment of choice for most of acute myocardial infarctions.

This July, TOPIC 2004 will focus on the combination of these kinds of unique Japanese therapeutic strategies with drug eluting stents (DES). As in 2003, the showcase event of the conference will be live demonstrations. The demonstrations will take place over two days and are designed to stimulate discussion on what will happen when DES meets Japanese PCI, while respecting the variety of therapeutic strategies.

Parallel to the live demonstrations, various scientific sessions will be held. We have invited many renowned foreign faculties with vast experiences in DES or other new modalities. In addition to the debates and educational seminars which were so popular last year, we are planning programs such as case review sessions entitled "The Toughest Time I Have Ever Had" and discussions about DES in the real world of various countries. There will also be a special program on peripheral interventions, which are expected to increase in number in the near future.

Tokyo Percutaneous Coronary Intervention Conference

TOPIC 2004 will be held from July 22 through July 24. The venue will change this year to the newly completed Cerulean Tower Tokyu Hotel which is located at the midtown of Tokyo.

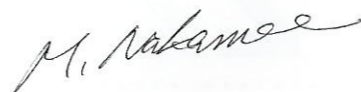

We look forward to seeing all of you at the conference.
